PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years building fintech, SaaS, and AI products for remote teams in the US, Australia, and Nigeria. Shipped two fintech products at Capera and human-in-the-loop AI features at WORKOPTi. Previously built an OpenAI-powered crypto chatbot at Token Metrics (three-time Employee of the Month) and improved application performance by 30–40% across products. Core stack: TypeScript, React/Next.js, Node.js, Python/FastAPI, PostgreSQL.

SKILLS

Frontend: React, Next.js, Vue.js, Nuxt.js, Redux, Zustand, Tailwind CSS, Shadcn UI, TanStack Query, Recharts, Storybook, Vitest, Jest.

Languages: TypeScript, JavaScript, Node, Python, PHP, SQL.

Backend: Node.js, Express.js, FastAPI, Laravel, REST APIs, GraphQL.

Mobile Apps: React Native, Expo.

AI: OpenAI API/SDK, LLM Applications, AI Chatbots, AI Integrations, Prompt Engineering.

Database: PostgreSQL, MySQL, MongoDB, Redis, Firebase, Supabase.

DevOps: GitHub Actions CI/CD, DigitalOcean, Vercel, AWS, Azure, Docker, Railway.

EXPERIENCE

SENIOR SOFTWARE ENGINEER

Token Metrics, USA (Full-Time, Remote)

September 2024 – January 2026

- Built an AI-powered crypto chatbot with the OpenAI SDK and PostgreSQL, letting users query crypto data in natural language.
- Led development, testing, and deployment of the Governance & Staking Dashboard, delivering production functionality for complex crypto workflows.
- Rebuilt the research blog platform, migrating it from WordPress to Next.js and Strapi CMS for better performance, scalability, and developer experience.
- Improved application performance by 30% by splitting monolithic modules into standalone services, decoupling the backend API from the Next.js app, migrating the database from Snowflake to Supabase, and adding caching, code splitting, and lazy loading.
- Resolved critical bugs reported by QA, Sentry, and Unguess, reaching 90% bug-free usability.

- Designed the foundation for the company's mobile app, establishing a reusable cross-platform architecture.
- Named Employee of the Month three times for technical execution, ownership, and cross-team impact.

TECHNICAL LEAD

Fuelsgate, Nigeria (Contract, Remote)

July 2024 – May 2025

- Designed and implemented the full application architecture across frontend, backend, and deployment, building a scalable foundation.
- Applied Atomic Design and SOLID principles, and documented APIs and components with Postman and Storybook.
- Wrote frontend and backend unit tests to reduce regressions.
- Improved performance with caching, code splitting, lazy loading, and state-management optimizations that cut unnecessary re-renders.
- Owned production deployments on DigitalOcean and Vercel, with GitHub Actions CI/CD for automated testing and deployment.

FULLSTACK SOFTWARE ENGINEER

ProDevs, USA (Full-Time, Remote)

March 2023 – May 2024

- Built a Chrome extension on the OpenAI API that contributed to a 25% increase in the platform's user base.
- Built Node.js/Express and Laravel REST APIs, improving data processing and retrieval efficiency by 25%.
- Improved frontend performance by 40% through browser caching and responsive design, which led to a client referral.
- Delivered a project in two months instead of the planned three.
- Integrated third-party payment and user verification services into production.

FRONTEND SOFTWARE ENGINEER

CosmoRemit, Australia (Contract, Remote)

May 2022 – February 2023

- Improved front-end rendering performance by 30% through virtualization and lazy loading.
- Kept REST API response times low with caching and query optimization.
- Established code review and testing practices, reducing bugs.
- Turned Figma designs into responsive components using atomic design patterns.

FULLSTACK SOFTWARE ENGINEER

Simpoo Business, Nigeria (Full-Time, Remote)

September 2021 – February 2023

- Improved front-end rendering performance by 30% through virtualization and lazy loading.
- Kept REST API response times low with caching and query optimization.
- Established code review and testing practices, reducing bugs.
- Turned Figma designs into responsive components using atomic design patterns.

FULLSTACK SOFTWARE ENGINEER

Olotu Square, Nigeria (Full-Time, Hybrid)

November 2019 – August 2021

- Raised user engagement by 15% on a PHP/Laravel cooperative platform.
- Integrated Paystack, Okra, Mono, Indicina, and Recova APIs.
- Automated deployments with GitHub Actions and managed dedicated virtual hosting.

EDUCATION

National Diploma & Higher National Diploma, Computer Science | Federal Polytechnic Nekede, Owerri |

2018 – 2023
